"Overall Difficulty Level of Questions": "medium",
  "Topics Covered (Aptitude,DSA,English etc.)": "Aptitude, DSA, Soft Skills, Computer Science Fundamentals, Development",
  "Any Interview Questions You Remember?": "There were only three HR questions asked:\n\n1. Are you open to rotational shifts?\n\n2. Are you open to all locations?\n\n3. Why do you want to join TCS?\n\n\nIn the TR+MR round, I was asked questions related to the skills mentioned in my resume. Some of the questions I remember are:\n\nQ1. What are closures in JavaScript?\nQ2. How does MongoDB store data internally?\nQ3. What new features were introduced in ES6 in JavaScript?\nQ4. What is the difference between let and const in JavaScript?\nQ5. What is a namespace in C++?\nQ6. What are default arguments in C++? (I was given a code snippet and asked to determine the output. The function void solve(int a=0, int b) was provided, and when solve(2, 3) was called, I had to determine the output.)\nQ7. What is the difference between arguments and parameters in C++?\nQ8. Different MongoDB queries for CRUD operations.\n\nI was also asked to solve one coding question. The problem statement was:\n\n\"The user will enter his/her name, and I need to print the unique vowels occurring in the name string.\"\n\nAdditionally, I was asked one SQL query involving the use of the ALTER statement.",
  "Stipend/CTC offered": "7 lpa",
  "Preparation Tips ( resources used for study)": "One cannot skip DSA at any cost. No matter how demotivated you feel, no matter if you are unable to solve a question, and no matter how hard DSA is, it is essential and should not be skipped under any circumstances.\n\nIf you are in your first or second year, you can explore competitive programming on platforms like CodeChef and Codeforces. However, if you are in your third or fourth year, focus solely on solving problems on LeetCode. There is no need to jump into competitive programming now. Instead, concentrate on solving problems on LeetCode, and you can refer to Striver's SDE sheet to get started.\n\nAlso, prepare well for aptitude tests. Many of my friends now regret ignoring and not preparing for aptitude. I am not saying you need to master it, but a decent level of aptitude preparation is necessary. For aptitude, I followed only one channel\u2014CareerRide.\n\nAnd one last thing\u2014stay consistent. Do not make excuses. Dedicate at least two hours daily to DSA, even during exam times. Do not listen to anyone who says that DSA is irrelevant in today\u2019s AI-driven world. DSA remains relevant and important. It enhances your problem-solving skills and helps you think outside the box. DSA is a must.\n\nMake sure to solve LeetCode's Problem of the Day (POTD) daily. Dedicate time to understanding the problem before jumping to the solution. If your concepts are not clear, I recommend watching Striver's videos and videos from codestorywithMIK.",
  "Rounds Description": "The first round was an online computer-based test, which included two sections: aptitude and coding. There were two coding questions that needed to be solved within the stipulated time. The second round was a Technical and Managerial (TR+MR) interview, where I was asked about the tech stack mentioned in my resume. The third and final round was the HR round, which lasted only 2-3 minutes. The HR asked simple questions, such as whether I was comfortable with rotational shifts and open to all locations.",
